Assignment 02 (Due: Friday, October 18, 2019, 11:59:00PM)

CSCE 322

THIS ASSIGNMENT IS ONLY WORTH 10% OF YOUR FINAL GRADE.

1 Instructions

In this assignment, you will be required to write JavaScript functions that simplify playing of the variation of Slippery Crossings.

1.1 Data File Specification

An example of properly formatted file is shown in Figure 1. The first file encodes a list of moves. The second file encodes the maze.

```

2 One Player, One Slide

The first part (onePlayerOneSlide in the file csce322a02part01.js) will take in one (1) argument (a maze) and return a function that takes in one argument (a direction for a slide), and returns the maze that is the result of making the slide in the initial maze. If the slide goes nowhere, the state of the maze is unchanged.

3 One Player, Many Slides

The second part (onePlayerManySlides in the file csce322a02part02.js) will take in one (1) argument (a maze) and return a function that takes in one argument (an array of directions for slides), and returns the maze that is the result of making the slides in the initial maze. If the goal is reached before the slides are exhausted, the solved maze is returned (with the player in the location of the goal).

4 Many Players, One Slide

The third part (manyPlayersOneSlide in the file csce322a02part03.js) will take in one (1) argument (a maze) and return a function that takes in one argument (an array of directions for slides), and returns the maze that is the result of making the slides in the initial maze. The first player will make the first slide, the second player will make the second slide, etc. (until every player has made a single slide). If the goal is reached before each player has a chance to make a slide, the solved maze is returned (with the winning player in the location of the goal). A player who is slid into will act as a wall (stopping the sliding player from progressing).

5 Many Players, Many Slides

The fourth part (manyPlayersManySlides in the file csce322a02part04.js) will take in one (1) argument (a maze) and return a function that takes in one argument (an array of directions for slides), and returns the maze that is the result of making the slides in the initial maze. The first player will make the first slide, the second player will make the second slide, etc. If the goal is reached before the slides are exhausted, the solved maze is returned (with the winning player in the location of the goal). A player who is slid into will act as a wall (stopping the sliding player from progressing).

6 Naming Conventions

Your files should follow the naming convention of csce322a02part01.js, csce322a02part02.js and csce322a02part03.js.

6.1 helpers.js

A file named helpers.js has been provided with the functionality to read the .m files into numerical matrices. If a modified helpers.js file is not included with your submission, the default will be used in its place.

7 webgrader Note

Submissions will be tested with node.js, not the browser. cse.unl.edu is currently running version 8.15.1 of node.
